

VEHICLE INSPECTION REPORT

AI-Powered Body + Engine Sound Analysis · May 31, 2026 at 15:15
Physical Defect Detection (7-class YOLO + Severity Model) + Engine Knock Audio Classification

VIN / Registration	SALWAZ2EU1RA987654	Mileage	45000
Make / Model	LAND ROVER LAND ROVER-SUV-TEST	Year	2024

AI Vehicle Health Assessment

Risk Level	Medium	Overall Status	ATTENTION
------------	--------	----------------	-----------

Key Risk Factors:

- Safety-critical components affected: Detachment

AI Inspection Summary

The inspection detected: Detachment. Safety-critical damage identified on Detachment requires immediate attention.

Defect Analysis — Dual Model Results

Detachment ■ **Safety-Critical** (Moderate, 56.0% confidence)
Detached panel or component is a road safety hazard — secure or replace immediately.

AI Recommendations

- Detached panel or component is a road safety hazard — secure or replace immediately.

Standard 7-Part Damage Checklist

Component	Defect Type / Severity	Confidence	Status
-----------	------------------------	------------	--------

Bonnet	No Damage Detected	—	—
Bumper	No Damage Detected	—	—
Dickey	No Damage Detected	—	—
Door	No Damage Detected	—	—
Fender	No Damage Detected	—	—
Light	No Damage Detected	—	—
Windshield	No Damage Detected	—	—
Total Unique Parts/Types	1	Overall Status:	ATTENTION

Additional Damage Detections (Severity Model)

Damage Type	Confidence	Severity Tier
Detachment	56.0%	Moderate

Annotated Images — Dual Model Detections

Blue/green boxes = part detections; Purple boxes = severity-only detections

This report was generated using the unified MEHRA inspection pipeline: physical defect detection with a 7-class part model and severity model, engine sound knock classification, and Groq LLaMA 3.3 for report analysis. Results should be verified by a qualified technician.
